### Things To Know About Hair Transplant

The new book is designed to support both men and women suffering with age related, genetic, or lifestyle associated hair loss as they consider the most suitable options available to them.

The book offers a detailed overview of the hair transplant industry, introduces Turkey as a world leader in the development and use of advanced techniques, and comprehensively discusses the patient journey right through from start to finish. Ultimately, the publication strives to make it easier than ever before for prospective patients to understand the process, know what to expect, and select the right clinic.

Our aim with our new book is to improve transparency across the industry and make vital information more easily accessible to those considering scheduling a hair transplant procedure, supporting them as they make an informed decision that's right for them.

### Process Steps

- 1 Selection and extraction of the best grafts
- 2 Graft Preservation
- 3 Micro Channels
- 4 Implantation of the grafts

### Micro-FUE Sapphire

This advanced technique allows major precision when creating micro-channels by making the incisions, the finesse of this blade reduces to a minimum any risk of infection and lastly can provide a greater number of grafts.

## DHI-choi Pen

This technique, is in fact the most recent one in Hair Transplantation Market, it's uniqueness stands in the direct implantation of the grafts, without the need of creating the Micro Channels first.

### Process Steps

- 1 Selection and extraction of the best grafts
- 2 Graft Preservation
- 3 Direct Implantation of the grafts

## Manual Hair Transplant with FUE Sapphire & DHI technique

The Manual technique is considered to be “Crème De La Crème” in Hair Transplantation. It can be performed only by a highly specialized doctor, hence very few clinics are eligible to offer it!

What makes this method so distinctive, is that the surgeon extracts the grafts one by one manually instead of using the micro -punch, which allows for a total preservation of the Donor area, even for difficult scalp types, and 100% conservation of the hair follicles.

## 06. OUR CLINIC

Based in London, performing under the safest conditions in Istanbul, Turkey, our Clinic is covered by JCI Accreditation and FDA Approved.

A "JCI" accreditation ensures, by attentive observation, that the specialized programs are arranged accordingly to manage any eventual risk or errors, to prevent infections, and to constantly monitor every outcome in order to assure the patient's safety and well-being.

Why is it important to have Accreditation? Simply because it helps to determine if an institution meets or exceeds minimum standards of quality.
